

## Answers In Creation Dinosaur Curriculum

### Test 2

1. Theropod dinosaur diet is considered:
  - a. Herbivorous
  - b. Carnivorous
  - c. Omnivorous
  - d. All of the above
2. This dinosaur is one of the earliest known dinosaurs, with specimens dating back to 228 Ma.
  - a. Majungasaurus
  - b. Acrocanthosaurus
  - c. Herrerasauris
  - d. Dilophosaurus
3. This dinosaur was famous for its role in the first Jurassic Park movie. Unlike in the movie, in real life there is no evidence that it could spit poison. Name this dinosaur.  

---
4. Unique among theropods, this dinosaur possessed dermal armor, in the form of small osteoderms running down the middle of its back.
  - a. Ceratosaurus
  - b. Spinosaurus
  - c. Majungasaurus
  - d. Coelophysis
5. This small carnivorous dinosaur lived during the Late Triassic, and is known for its hollow bones.
  - a. Dilophosaurus
  - b. Ceratosaurus
  - c. Coelophysis
  - d. Spinosaurus
6. This dinosaur is known by its distinctive horns that resemble a bull's horns.
  - a. Ceratosaurus
  - b. Carnotaurus
  - c. Allosaurus
  - d. Spinosaurus
7. The remains of this medium-sized theropod have been found in Madagascar. Reaching 23+ feet, this dinosaur lived from 70 to 65.5 Ma.
  - a. Dilophosaurus
  - b. Majungasaurus
  - c. Allosaurus
  - d. Spinosaurus

### Test 2 Lessons

Lesson 6 – Theropod Overview

Lesson 7 – Herrerasauria

Lesson 8 – Coelophysis

Lesson 9 – Dilophosaurus

Lesson 10 – Ceratosaurus

Lesson 11 – Carnotaurus

Lesson 12 – Majungasaurus

8. This dinosaur sported two crests on the top of its skull, and it was named after this feature.
- Herrerasaurus
  - Dilophosaurus
  - Giganotosaurus
  - Ceratosaurus
9. This dinosaur had a long, narrow skull that lacked nearly all the specializations that characterized later dinosaurs. Its fossils are found in northwestern Argentina.
- Spinosaurus
  - Carnotaurus
  - Dilophosaurus
  - Herrerasaurus
10. Theropods that have feathers have usually retained scales only on their feet.
- True
  - False
11. This theropod lived from 216 to 205 Ma, and reached almost 10 feet in length. Who is he?
- \_\_\_\_\_
12. This dinosaur is the only known dinosaur to have eaten its own species. This cannibal dinosaur is
- Majungasaurus
  - Dilophosaurus
  - Ceratosaurus
  - Herrerasaurus
13. This dinosaur lived about 100 million years ago in what is now Argentina. It reached lengths of up to 25 feet.
- Dilophosaurus
  - Ceratosaurus
  - Carnotaurus
  - Majungasaurus
14. This dinosaur reached lengths up to 30 feet, and its fossils have been found in rocks dating to 153 to 148 Ma, during the Jurassic Period.
- Ceratosaurus
  - Carnotaurus
  - Majungasaurus
  - Herrerasaurus
15. Coprolites most likely from \_\_\_\_\_ indicate that this dinosaur was able to digest bone.
16. \_\_\_\_\_ reached up to 20 feet in length, was 5 feet tall at the hips, and weighed up to 1,000 pounds. Its fossils have been found in rocks dating from 197 to 183 Ma.
