

Answers In Creation Dinosaur Curriculum

Test 5

1. Maniraptora dinosaurs are considered by scientists to have survived to this day, with their descendents on this planet in the form of birds.
 - a. True
 - b. False
2. This dinosaur lived about 120 Ma, and only reached a length of 3 feet. _____
3. This dinosaur lived about 75 to 71 Ma, and was almost 7 feet long. _____
4. Dromaeosaurid dinosaurs have this distinctive feature on their foot.
 - a. Six digits to give them better traction when running
 - b. Soft pads on the bottom of their feet for stealth
 - c. A sickle claw used for attacking their prey
5. This dinosaur reached 23 feet in length, and lived approximately 72 to 68 million years ago.
 - a. Microraptor
 - b. Therizinosaurus
 - c. Troodon
 - d. Deinonychus
6. This dinosaur had claws on its hands that reached lengths of three feet.

7. This family of dinosaurs lived from 160 to 65 million years ago. They varied in size from 20 to 80 inches.

8. This raptor species is found in rocks dated from 75 to 65 million years ago. It reached lengths of up to 8 feet, and weighed in at 110 pounds.
 - a. Microraptor
 - b. Deinonychus
 - c. Velociraptor
 - d. Troodon
9. Although Velociraptor was the term used for the raptors in the Jurassic Park movie, the movie makers modeled their raptor after Deinonychus, and increased the size of the dinosaur in the film.
 - a. True
 - b. False

Test 5 Lessons

Lesson 29 – Maniraptora Overview
Lesson 30 – Therizinosaurus
Lesson 31 – Alvarezsauridae
Lesson 32 – Oviraptorosaurs
Lesson 33 – Dromaeosauridae
Lesson 34 – Microraptor
Lesson 35 – Deinonychus
Lesson 36 – Velociraptor
Lesson 37 – Troodon

10. This raptor revolutionized the way scientists thought about dinosaurs, leading to the “dinosaur renaissance.”

11. Although they have the name ‘raptor’ as part of their name, oviraptorosaurs are not raptors (they are not part of the Family Dromaeosauridae).

- a. True
- b. False

12. This dinosaur had one of the largest known brains of any dinosaur, relative to its body mass.

13. Microraptor had four wings instead of two.

- a. True
- b. False

14. The Alvarezsaur genus *Shuvuuia deserti* is preserved with down-like, feathery structures.

- a. True
- b. False

15. Oviraptorosaurs were feathered maniraptoran dinosaurs. The largest oviraptorosaur reached 26 feet long and weighed over 2 tons. This genus is known as...

- a. Oviraptor
- b. Gigantoraptor
- c. Caudipteryx

16. This raptor lived from 115 to 108 million years ago, and was 11 feet long.

- a. Deinonychus
- b. Troodon
- c. Microraptor
- d. Velociraptor
